(54) Title: A UNIT AND A METHOD FOR HANDLING A DATA OBJECT

(57) Abstract: The present invention relates to a unit and a method for handling a data object that is to be transmitted over a link (39, 40, 41, 42), said data object being divided into at one least data unit. According to the invention the data unit that is in turn to be transmitted over the link (39, 40, 41, 42) should be handled differently depending on where a buffer fill level in a buffer (33, 34, 35, 36, 37, 38) preceding the link (39, 40, 41, 42) is in relation to at least one buffer threshold (51, 52, 53, 54, 55, 56, 57, 58, 59) in order to minimise end-to-end delay.
